 Sequence 3, Application US/09539601C
Patent No. 6630343
GENERAL INFORMATION:
TITLE OF INVENTION: Hepatitis C Virus Cell Culture System;
TITLE OF INVENTION HEPATITIS C VIRUS CELL CULTURE SYSTEM;
FILE REFERENCE: all sequences
CURRENT PELICATION NUMBER: US/09/539,601C
CURRENT PILING DATE: 2001-08-30
EARLIER APPLICATION NUMBER: 199 15 178.4 GERMANY

The present invention relates to GB virus-B. The nucleic acid molecules of the invention are useful for indirectly studying the molecular properties of hepatitis C virus (HCV). The infectious nucleic acid sequence of the GB virus-B clone and the HCV/GBV-B chimeras may be used in the development of vaccines and therapeutics for HCV. (Updated on 11-SEP-2003 to standardise OS field)
 New infectious nucleic acids of the GB virus-B clone, useful for indirectly studying the molecular properties of hepatitis C virus (HCV) and in developing vaccines and therapeutics for HCV.

 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This invention relates to novel isolated chimeric GB virus B (GBV-B)/HCV polynucleotides. Specifically, it refers to using the hepatotropic flavivirus GBV-B that has a unique phylogenetic relationship to the human hepatitis C virus (HCV) and can serve as a surrogate virus in drug discovery efforts related to antiviral drug development. The present invention describes the construction of an infectious molecular clone
 New chimeric GBV-B polynucleotide, useful as a model for hepatitis C virus, for identifying compounds active against a viral infection, or developing hepatitis C virus preventive and therapeutic treatments.

| ing the newly determined 3' terminal sequence of GBV-B. Furthermore, GBV-B/HCV chimeras exhibit liver-specific expression and express HCV relope proteins such that they can have utility as a vaccine immunogen: hepatitiss C. In addition, they can be used for screening compounds sive against viral infection, as well as for developing HCV ventative and therapeutic treatments. Accordingly, these compositions libit virucidal, antiinflammatory and hepatotropic activities. This yourcleotide sequence is the GBV-B cDNA sequence of the invention.  There is the GBV-B cDNA sequence of the invention.  The part of the composition of the invention.  The part of the composition of the invention. The invention describes a new isolated polynucleotide (I) encoding a 3' sequence of the GB virus B (GBV-B) genome, or which comprises a chimeric GBV-B genome, where at least part, but not all of a 5' nontranalated region (NTR) sequence is derived from a hepatitis C virus (HCV) 5' NTR. (I) is a GB virus B and/or hepatitis C virus polynucleotide comprising a fully defined of 260 or 9399 bp (SEQ ID NOS: 1 or 2). The polynucleotides or chimaeras are useful diagnosing or treating hepatitis C virus (HCV) and in investigating the mechanisms for the different biological properties of the viruses. This sequence represents a Hepatitis GB virus B (GBV-B) 3' terminal polynucleotide.

 This invention relates to a novel GB virus-B (GBV-B) replicon and replicon enhanced cells. A GBV-B replicon is an RNA molecule able to autonomously replicate in a culturad cell to produce detectable levels of one or more GBV-B proteins. Specifically, it may comprise the GBV-B 5' UTR, GBV-B structural region, selection or reporter sequence, internal
 gene;
 New GB virus B (GBV-B) replicon for identifying compounds that inhibit GBV-B or hepatitis C virus, comprises a GBV-B 5' UTR, a selection or reporter sequence, an internal ribosome entry site, an NS3-NS5B sequence, and a GBV-B 3' UTR.

ribosome entry site, NS3-NS5B sequence, and GBV-B 3' UTR. Accordingly, they are useful in providing tools for studying GBV-B replication, polyprotein production and processing, identifying compounds that inhibit GBV-B, providing a surrogate model for identifying compounds that inhibit HCV, and providing a scaffold for producing GBV-B/HCV chimeric replicons. Our providing a scaffold for producing GBV-B/HCV chimeric replicons. Ocompounds that inhibit GBV-B and the hepatitis C virus (HCV), anti-HCV agents. The GBV-B subgenomic replicon constructs termed GBV-B-neo-RepA), neo-RepB, neo-RepC and neo-RepD were produced by replacing the regions coding for structural proteins and the NS2 protein with the sequences of neomycin phosphotransferase gene (neo) and encephalomycocarditis virus (EMCV) internal ribosome entry site (IRES) in the plasmid FL3/pAcYC177. This polymuclectide sequence is the genomic GBV-B replicon CDNA sequence of the invention.

 The present invention relates to GB virus-B. The nucleic acid molecules of the invention are useful for indirectly studying the molecular properties of hepatitis C virus (HCV). The infectious nucleic acid sequence of the GB virus-B clone and the HCV/GBV-B chimeras may be used in the development of vaccines and therapeutics for HCV. (Updated on 11-SEP-2003 to standardise OS field)
 New infectious nucleic acids of the GB virus-B clone, useful for indirectly studying the molecular properties of hepatitis C virus (HCV) and in developing vaccines and therapeutics for HCV.

vaccine; reagents; non-A;
tamarin; infected plasma;
 Double stranded hepatitis GB virus (HGBV) DNA obtd. from HGBV infected tamarin plasma, using standard procedures, was used to prepare a lambda phage HGBV cDNA library. Clones were rescued from the lambda phage, searched against a sequence database and found to be unique HGBV sequences. The clones were then used to assemble the sequences AAT00129/30 (GB contig A and B) which encode the proteins AAR94345-47 (the 3 possible coding strand reading frames) and AAR82072, respectively. Reagents which comprise the HGBV DNA, or its protein prods. can be used for the diagnosis, therapy or in a vaccine to prevent HGBV infection. (Updated on 27-AUG-2003 to correct OS field.)

 The present invention describe a method for detecting target hepatitis GB virus (HGBV) nucleic acid (THN) in a test sample (T) suspected of containing HGBV. The method involves reacting (T) with a HGBV polymucleotide probe (I) containing 15 contiguous nucleotides, and which selectively hybridises to the HGBV genome or its full complement, and detecting the complex that contains THN, indicating the presence of target HGBV. The method is used for detecting target HGBV nucleic acid in the test sample suspected of containing HGBV and for characterisation of newly ascertained etiological agent of non-A, non-B, non-C, non-D and non-E hepatitis causing agents collectively termed as hepatitis GB virus. AAAA55270 to AAAA5549 and AAB08985 to AAB09808 represent nucleotide and (Updated on 06-AUG-2003 to correct OS field.)
 Hepatitis GB virus, HGBV; diagnosis, therapeutic; immunogenic; infection; detection; characterisation; hepatitis; ds.

The present invention describe a method for detecting target hepatitis GB virus (HGBV) nucleic acid (THN) in a test sample (T) suspected of containing HGBV. The method involves reacting (T) with a HGBV polynucleotide probe (I) containing 15 contiguous nucleotides, and which selectively hybridises to the HGBV genome or its full complement, and detecting the complex that contains THN, indicating the presence of target HGBV. The method is used for detecting target HGBV nucleic acid in the test sample suspected of containing HGBV and for characterisation of newly ascertained etiological agent of non-A, non-B, non-C, non-D and non-E hepatitis causing agents collectively termed as hepatitis GB virus. AAAA55270 to AAA55489 and AAB08985 to AAB09480 represent nucleotide and (Updated on 06-AUG-2003 to correct OS field.) polynucleotide probe and detecting the complex that contains target HGBV. Example 9; Col 419-438; 369pp; English

 GTAGGCGGCGGGATCATGACGCTCGCGTGATGACAAGCGCCCAAGCTTGACTTGACTAGATGGC 180
 bepatitis GB virus (HGBV) types A, B and C. Unlike HGBV-A and -C, HGBV-B appears similar to the hepatitis C virus (HCV) and pertivirus genera of the Flaviviridae. Similar to HCV, HGBV-B 5/NTR contains an internal ribosome entry site. Nucleic acids (including antisense) derived from HGBV 5/NTR can be used to control the translation of HGBV nucleic acids to proteins. Blocking or decreasing translation may decrease the pathology of a viral infection. Enhancement of translation may allow for stronger immune responses. HGBV nucleic acids can also be used to screen block/organs for the presence of HGBV, in epidemiological studies and possibly to purify HGBV proteins for use in diagnostic assays. (Updated on 27-AUG-2003 to correct OS field.)

 The present invention describe a method for detecting target hepatitis GB virus (HGBV) nucleic acid (THN) in a test sample (T) suspected of containing HGBV. The method involves reacting (T) with a HGBV polynuclectide probe (I) containing 15 contiguous nucleotides, and which selectively hybridises to the HGBV genome or its full complement, and detecting the complex that contains THN, indicating the presence of target HGBV. The method is used for detecting target HGBV nucleic acid in the test sample suspected of containing HGBV and for characterisation of newly ascertained etiological agent of non-A, non-B, non-C, non-D and non-E hepatitis causing agents collectively termed as hepatitis GB virus. AAASS270 to AAAASS489 and AABOS885 to AABOS480 represent nucleotide and protein sequences used in the exemplification of the present invention.

Double stranded hepatitis GB virus (HGBV) DNA obtd. from HGBV infected tamarin plasma, using standard procedures, was used to prepare a lambda plage HGBV cDNA library. cDNA clones (which encode the proteins AARB1402-04) rescued from the lambda phage, were found to have nearly 100% sequence homology with the HGBV-B DNA sequence AAT00040. Reagents which diagnosis, therapy DNA, or its protain prods. can be used for the diagnosis, therapy or in a vaccine to prevent HGBV infection. (Updated on 27-AUG-2003 to correct OS field.)
 Hepatitis GB virus; HGBV; diagnosis; treatment; vaccine; reagents; non-A; non-B; non-E; HGBV-B; tamarin; infected plasma; lambda phage; cDNA library; 88.

This invention relates to a novel GB virus-B (GBV-B) replicon and replicon enhanced cells. A GBV-B replicon is an RNA molecule able to autonomously replicate in a cultured cell to produce detectable levels of cone or more GBV-B proteins. Specifically, it may comprise the GBV-B 5.

UTR, GBV-B structural region, selection or reporter sequence, internal ribosome entry site, NS3-NSSB sequence, and GBV-B 17W. Accordingly, they are useful in providing tools for studying GBV-B replication, to plyprotein production and providing scaffold for producing GBV-B replication, to plyprotein production and processing, identifying compounds that inhibit GBV-B, providing a surrogate model for identifying compounds that inhibit HC, ompounds that inhibit GBV-B may be useful antiviral agents, specifically anti-to the similarity between GBV-B and the hepatitis C virus (HCV), compounds that inhibit GBV-B may be useful antiviral agents, specifically arti-tor agencies. The GBV-B subgenomic replace constructs termed GBV-B. C compounds the regions coding for structural proteins and the NS2 protein with the sequences of neowachies virus (EMCV) internal ribosome entry site (IRES) in the plasmid FLJ/pACYC177. This polymucleotide sequence is the subgenomic construction.

 TACCGAGTCATTATCGGCAAACTGTGATAGTTCCAAAGGAGGAGGAGTCTTCGTGAAGACCCC 4233
 The present invention describe a method for detecting target hepatitis GB vortas (HGBV) nucleic acid (THN) in a test sample (T) suspected of containing HGBV. The method involves reacting (T) with a HGBV polymucleotide probe (I) containing 15 contiguous nucleotides, and which selectively hybridises to the HGBV genome or its full complement, and detecting the complex that contains THN, indicating the presence of target HGBV. The method is used for detecting target HGBV nucleic acid in the test sample suspected of containing HGBV and for characterisation of newly ascertained etiological agent of non-B, non-C, non-D and non
 Hepatitis GB virus; HGBV; diagnosis; therapeutic; immunogenic; infection;
 Detecting target hepatitis GB virus nucleic acid in a test sample suspected of containing HGBV comprises reacting the test sample the HGBV polynucleotide probe and detecting the complex that contains target HGBV.
 -E hepatitis causing agents collectively termed as hepatitis GB virus. AAA55270 to AA55489 and AAB08985 to AAB09480 represent nucleotide and protein sequences used in the exemplification of the present invention. (Updated on 06-AUG-2003 to correct OS field.)

Hepatitis GB virus; HGBV; diagnosis; treatment; vaccine; reagents; non-A;
non-B; non-C; non-D; non-E; clone 13; tamarin; infected plasma;
lambda phage; cDNA library; ss.
 Double stranded hepatitis GB virus (HGBV) DNA obtd. from HGBV infected tamarin plasma, using standard procedures, was used to prepare a lambda phage HGBV cDNA library. The cDNA clone AAT00045, was rescued from the lambda phage, searched against a sequence database and found to be an unique HGBV sequence. Reagents which comprise the HGBV DNA, or its protein prods. can be used for the diagnosis, therapy or in a vaccine to prevent HGBV infection. (Updated on 27-AUG-2003 to correct OS field.)

Drosophila melanogaster genome survey sequence SP6 end of BAC BACNI6/15 of DrosBAC library from Drosophila melanogaster (fruit fly), genomic survey sequence.
 2227 GTATCTTATTTTAGCCTACCTCTGTTACTTGTCCCTTTGTTTTTGGGCGCGCGTTCTGGTTA 2286
 Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)

- Web : www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of s collaboration with the Buropean Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre
 library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
 Drosophila melanogaster (fruit fly)
Drosophila melanogaster
Eukaryota, Metazoa, Arthropoda; Hexapoda; Insecta; Pterygota;
Neoptera; Endopterygota; Diptera; Brachycera; Muscomorpha;
Ephydroidea; Drosophilidae; Drosophila.
 Similarity 18.4%; Score 53.4; DB 9; Length 1101; Similarity 18.4%; Pred. No. 0.0025; 3; Conservative 161; Mismatches 163; Indels 0

Submitted (11-JUN-1999) Genoscope - Centre National de Sequencage:
BP 191 91006 ENYR cedex - FRANCE (E-mail: seqref@genoscope.cns.fr
- Web : www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Geoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcokI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://worls.med.buffalo.edu/drosophila_bac.htm.

Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage :
BP 191 91006 EVRY cédex - FRANCE (E-mail : seqref@genoscope.cns.fr

- Web : www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Geoegaw and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain vise for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

APPLICANT: SHERI L. BUIJK
APPLICANT: ISA K. MUSHAHWAR
TITLE OF INVENTION: NON-A. NON-B. NON-C, NON-D, NON-E HEPATITIS
TITLE OF INVENTION: REAGENTS AND METHODS FOR THEIR USE
NUMBER OF SEQUENCES: 716
CORRESPONDENCE ADDRESS:
ADDRESSE: ABBOTT LABORATORIES D377/AP6D
 4
 Length 9143;
 Query Match 96.4%; Score 9059.8; DB 4; Length Best Local Similarity 99.6%; Pred. No. 0; Matches 9096; Conservative 0; Mismatches 37; Indels
 COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/488,446
FILING DATE:
 SSEE: ABBOTT LABORATORIES D377/AP6D
F: 100 ABBOTT PARK ROAD
ABBOTT PARK
 ATTORNEY AGENT INFORMATION:
NAME: POREMBSKI, PRISCILLA E.
REGISTRATION NUMBER: 33.207
REFERENCE DOCKET NUMBER: 5527.PC.01
TELECOMMUNICATION INFORMATION:
TELEPHONE: 708-937-6365
INFORMATION FOR SEQ ID NO: 390:
SEQUENCE CHARACTERISTICS:
LENGTH: 9143 base pairs
 PRIOR APPLICATION DATA:
APPLICATION NUMBER: US/08/424,550
FILING DATE:
 TYPE: nucleic acid
STRANDEDNESS: double
TOPOLOGY: linear
MOLECULE TYPE: DNA (genomic)
 ZIP: 60064-3500

ANTHONY S. LEARY
ANTHONY S. ERKER

SHERI L. BUIJAK

ISA K. MUSHAHWAR

TITLE OF INVENTION: NON-A, NON-B, NON-D, NON-E HEPATITIS

REAGENTS AND METHODS FOR THEIR USE
 COUNTEY: USA
COUNTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: 1BM PC compatible
COMPUTER: 1BM PC compatible
COMPUTER: 1BM PC compatible
COMPUTER: 1BM PC compatible
COMPUTER: 1BM PC LOSIMS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/467,344A
FILING DATE: 07-Jun-1995
CLASSIFICATION: CURNOWn>
 CORRESPONDENCE ADDRESS:
ADDRESSER: ABBOTT LABORATORIES D377/AP6D
STREET: 100 ABBOTT PARK ROAD
CITY: ABBOTT PARK
 PRIOR APPLICATION DATA: APPLICATION NUMBER: 08/424,550
 Sequence 393, Application US/08467344A Patent No. 6586568 GENERAL INFORMATION:
 GGGCTTAACGACCCCGC 9133

APPLICANT: SHERI L. BUIJK
APPLICANT: ISA K. MUSHAHWAR
TITLE OF INVENTION: NON-A, NON-B. NON-C, NON-D, NON-E HEPATITIS
TITLE OF INVENTION: REAGENTS AND METHODS FOR THEIR USE
NUMBER OF SEQUENCES: 716
ADDRESSEE: ABBOTT *****
STREFT.
 DB 4; Length 9143;
 4 ;
 Indels
 COUNTRY: USA
ZIP: 60064-350
COMPUTER RADABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/424,550B
FILING DATE:
CLASSIFFCATION: 435435
ATOMES PORREBSKI, PRISCILLA E.
REGISTRATION NUMBER: 33,207
REPERENCE/DOCKET NUMBER: 5527.PC.01
TELECOMMUNICATION INFORMATION:
TELEPHONE: 708-938-2653
INFORMATION FOR SEQ ID NO: 390:
SEQUENCE CHARACTERISTICS:
'FWATTH: 9143 base pairs

INFORMATION FOR SEQ ID NO: 393:
SEQUENCE CHARACTERISTICS:
LENGTH: 9143 base pairs
TYPE: nucleic acid
TYPE: nucleic acid
TYPE: nucleic acid
STRANDEDNESS: double
 TOPOLOGY: linear
MOLECULE TYPE: DNA (genomic)
FEATURE:
 ; NAME/KEY: 3'UTR
; LOCATION: 9038..9143
US-08-424-550B-393
 446..9037
 NAME/KEY: 5'UTR
LOCATION: 1..445

 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
